# SWEET STUFF

by Terry Ross

**L**iteGear™ bags are a relative newcomer to the luggage industry, but by the looks of things their new lightweight yet durable offerings for just about every kind of travel will be a hit with golf vacationers.

The mantra of this luggage line is building products that are lightweight, durable and crafted with features that simply make life easier. All of their travel items are made with the customer in mind with a satisfaction guarantee.

For instance, the Tri-fold Garment Sleeve is a handy accessory for overnight or to fit in a larger bag. It can be folded up to fit in even the smallest of carry-on bags, or can be used as a stand-alone bag with its hanger carry handle. This innovative and light weight bag keeps suits and dresses wrinkle-free with padded fold points, two inside mesh pockets as well as one large pleated pocket for shoes, and features two side release adjustable buckles that accommodates small and large loads. It weighs just more than one pound, is made of Polyester and unfolds to 37" x 19.5" x 2" and comes in black.

The 26-inch Hybrid Bag is made to be checked and smartly designed with loads of thoughtful pockets and zippers for great versatility. It is extremely lightweight but carries much more than you would think in its well-designed size as a mid-size carry-on. Plenty of room for days on the road with 4,430 cubic inches of space in a bag that measures 15" x 11" x 26"

Weighing only 7 lbs., 10 oz. and ruggedly constructed, the Hybrid's hi-density molded foam technology coupled with soft-side front pocket panels make these bags super light and super durable. Features include locking telescoping handle, inline skate wheels with sealed ball bearings, zippered expansion panels adds 3 inches of depth, padded handles on top and side, three huge external zippered pockets, two internal compression straps, large internal mesh pocket and an adjustable piggy-back strap. This bag comes in black and Mallard Green.

The small and large Kompressor Cubes are a nice accessory offered by the company to help organize your life while travelling. Useful for packing anything like cords, socks and hosiery--these cubes compact items and keep things separate for better organization and overall packing. The cubes compress to nearly half of the size once zipped up so you can pack more and keep items organized.

**S**tretching out and warming up for a session on the range or a round of golf is not only good for your body but your game as well. A new warmup club that serves as a hitting tune-up before practice or playing from DST Golf has that goal in mind with its new lineup of Compressor Warm-Up Clubs featuring patent-pending Delayed Strike Technology designed to speed game improvement among players of all skill levels.

Based on extensive analysis of the greatest ball strikers in history, DST's Compressor clubs feature a scientifically-curved shaft engineered to replicate the shape of a normal shaft in the optimal impact position. This unique design helps players learn how to control the club face through impact and compress the ball, which leads to improved consistency, control and accuracy. Additionally, the club's "Hand Position Alignment Marker" ensures players replicate the optimal impact position at set-up, thus simplifying the swing and engraining the muscle memory needed to consistently achieve this scientifically-proven optimal position.

"Our warm-up clubs are the first in history that teach the optimal impact position and enable golfers to feel what it's like to control the club face through impact, making them an intuitive way for all players to ingrain a repeatable and reliable swing," said DST Golf Founder and CEO Bertie Cordle. "The Delayed Strike Technology we've pioneered is already receiving widespread praise and rapid adoption among Tour players and Master Professionals worldwide."

Available in 8-iron and wedge models, DST Compressor clubs simplify the swing by stripping out complicated and unnecessary movements. This is achieved by automatically pre-setting the hands in the optimal impact position, which is identical for all normal shots (chip, pitch and full swing).

Developed by a former tour player, DST Compressor clubs reinforce the correct position at impact, the moment of truth. This gives the golfer control over the club face until after the ball is struck which promotes improvement and consistency in all areas of the game, translating to quantifiable success on the course.
