[DST Golf's](#) Compressor Warm-Up Club Used by More than Half the Competitors at The Presidents Cup

(SALISBURY, England) – [DST Golf](#) – developer and manufacturer of ground breaking warm-up clubs that benefit players of all skill levels – reports that more than half of the players competing at this week's Presidents Cup use the company's Compressor as part of their training regimen.

Helping golfers of any skill level locate, train and perfect the Optimal Impact Position, the Compressor has rapidly become the No.1 warm-up club on all major Tours worldwide. The large and growing user base includes more than 300 Tour professionals who trust the Compressor, including five of the top-eight finishers at the recent Alfred Dunhill Links Championship.

“At each Tour stop, we usually have players approach us about getting a club because they've seen or heard a fellow competitor rave about it,” said Richard Massey, VP of Operations for DST Golf in the United States. “This week, we expect to see nearly half the players at the Presidents Cup using their Compressor while warming up. We wish them all the best of luck.”

The Compressor features a curved shaft and an amended sole angle that automatically brings the hands and body into the ideal position at impact. Transferring this feeling to regular clubs helps players compress the ball correctly instead of releasing the club too early and lifting the ball through impact.

“We designed the Compressor based on research that shows how crucial it is to be in the correct position at impact,” says Bertie Cordle, founder and CEO of DST Golf. “The moment you strike the ball should look and feel the same for all golfers, which is why our warm-up clubs works so well for professionals and amateurs alike.”

Also favored by top instructors, the curved shaft of the Compressor is engineered to replicate the shape of a normal shaft in the optimal impact position. This unique design helps golfers learn how to control the club face through impact and compress the ball, which leads to improved consistency, control and accuracy. The “Hand Position Alignment Marker” ensures proper setup and allows players to see and feel what the Optimal Impact Position looks like before taking a swing.

Developed by a former European Challenge Tour player after years of research on the biomechanics of impact, the DST Compressor teaches the golfer two things: how to swing the club on plane and how to maintain tension in the shaft until after impact. These are the two critical aspects to achieve better ball striking, control, consistency and accuracy.

About DST Golf

Based in Salisbury, England, DST Golf was founded by former European Challenge Tour player Bertie Cordle in 2013. Cordle taught at a number of top flight golf academies in the UK, Portugal and Germany and spent 3 years studying the biomechanics of ball striking, which culminated in the design and development of DST Golf's patent pending technology. DST Golf clubs are recognized as an Approved Product by the PGAs of Europe.
