DST Golf Compressor Trusted by Web.com Tour's Chile Classic Winner

Revolutionary Warm-Up Clubs Now Used by Over 40 Tour Professionals and Trainers

(SALISBURY, England) – [DST Golf](#) – developer of award-winning warm-up clubs featuring patent-pending Delayed Strike Technology – confirms that Dawie van der Walt, the winner of the Web.com Tour Chile Classic trusted the company's innovative [DST Compressor](#) club for practice between tournament rounds.

In addition to helping players arrive at the Optimal Impact Position, Tour players benefit from the Compressor's ability to help keep the club and arms aligned throughout the swing plane. The curved shaft and amended sole angle technology facilitates the optimal movement of sustaining the line of compression through impact. DST Golf clubs offer players of every skill level the chance to locate, train and perfect the key movements of the Optimal Impact Position.

"I'm delighted with my win in Chile. I hit my irons really well during the week and now have a tremendous amount of confidence in my game for the rest of the season." says Dawie van der Walt. "Since I started working with DST clubs, the feeling of a correct impact position has definitely translated into a more solid and consistent swing for me. It's great to know that I can take the feeling I trust on the range out on the course."

The Chile Classic is van der Walt's first on the Web.com Tour, where he now sits fifth in the current point standings. This is the South African's seventh professional victory which includes two European Tour wins in 2013.

"We want to congratulate Dawie on his well-deserved victory," says DST Golf Founder and CEO Bertie Cordle. "It's wonderful to follow a talented and ambitious tour player and to see the potential of what our clubs can do for golfers."

Recently approved by the PGAs of Europe, DST Golf clubs were launched at the 2015 PGA Merchandise Show and have quickly gained a strong following by both players and trainers on the PGA, LPGA and Web.com Tours. Leading national teaching academies have also adopted the use of Compressor and CR-10 clubs for the benefit of their students.

The complete lineup of DST Golf comprises two distinct clubs: The Compressor, featuring a scientifically curved shaft and the CR-10; designed as a transition club that incorporates the sole of the Compressor with a straight shaft. About DST Golf

Based in Salisbury, England, DST Golf was founded by former European Challenge Tour player, Bertie Cordle in 2013. Cordle taught at a number of top flight golf academies in the UK, Portugal

and Germany and spent three years studying the biomechanics of ball striking which culminated in the design and development of DST Golf's patent pending technology.
